

# DRY CLAD TERRACOTTA PANEL TILES

## CREATE NICHE MASTERPIECE

Citadel has tie up with the largest brands manufacturing facility in the world for Terracotta tiles in Europe and S. E. Asia. It has installed Terracotta Tiles in numerous prestigious projects in India.

Terracotta panels are made from clay and the production process does not produce any sewage or sludge or emissions and it is therefore a green product. Due to the unique hollow structure of the panels, the panel acts as an insulation medium against the heat and cold and also noise.

The highly technical installation guarantees a waterproof façade.

### The advantages of the Terra Cotta Panels are as follows:

- Green product and environment friendly.
- The panels are hollow and thereby act as an insulating medium and protect against noise and heat/cold.
- The panels are light in weight and do not load the building too much. They are easy to cut and handle, and install.
- These panels are fire retardant and maintenance free, have a long life span, and also acid and alkali resistant.
- These panels come in variety of colors and designs. The colors are not from chemical pigment but from natural minerals. Also almost 80 colors are available to meet most requirements.
- The panels are made on completely automatic lines and meet international norms.
- The panels are supplied with a complete installation system and are easy to install.
