## PRODUCT INTRODUCTION

---

Our Ceramic Tile With Dry Cladding System offers a groundbreaking solution in facade design, bringing both beauty and durability to any architectural space. This innovative process successfully eliminates internal tension within the tile panel, creating a uniformly large, flat surface that can be cut or trimmed with precise accuracy to suit any project requirement.

## WHY CHOOSE CERAMIC TILE WITH DRY CLADDING SYSTEM?

---

- **Dense and Durable:-** Our tiles are exceptionally compact, with near-zero porosity and water absorption under 0.08%, ensuring strength and longevity.
- **Low Maintenance:-** The dense surface resists wear, keeping maintenance needs low for years of dependable beauty.
- **UV Resistant:-** Designed to withstand UV rays, Ceramic Tile with Dry Cladding System preserves its vibrant color and finish in any outdoor setting.

## ADVANTAGES

---

Resistant to High  
Temperature

Light Weight

Scratch Resistant

Hygienic

Easy to Clean

Resistant to UV Light

Water Proof

Durability

# INSTALLATION MECHANISM

## HIDDEN MECHANISM

Our Ceramic Tile With Dry Cladding System Features a Hidden Mechanism for a seamless appearance. The anchor used for fixing is concealed from the front view and can be achieved through:

**(a) Slotting** – A precise incision or groove created on the tile edge, or

**(b) Milling Kerf** – A continuous cut along the tile edge (available on request).

## HYBRID MECHANISM

Our Hybrid Mechanism combines structural adhesives with safety hooks to secure cladding materials. This system not only supports the weight of the slabs but also ensures exceptional resistance, making it ideal for large-sized, slimline tiles. It accommodates irregular layouts and alignments, offering both flexibility and robust performance for diverse design needs.
